

WELDING DEVICE FOR FRAMES

FAST AND PRECISE WORK - WITH ROTATION FUNCTION FOR INCREASED ERGONOMICS

ADVANTAGES

Our frame welding fixtures are specially designed for the production of rectangular frames.

Supports with exposed corners on the top and bottom provide maximum accessibility for machining.

PROPERTIES

The guaranteed right-angled adjustment of the frame width and frame height all work steps of measuring and aligning are eliminated.

Mechanical clamping elements with spindle pressure support the compensation of unevenness.

Set up - insert frame elements - clamp - weld - done.

The built-in 360 degree rotation function supports the welding of both sides of the frame as well as its finishing at the weld seam without time-consuming handling processes.

An optionally available measuring system with digital display additionally reduces the set-up time considerably.

ACCESSORIES

Optional equipment for the assembly of intermediate struts or add-on elements are available in our accessories.

Highest quality, Made in Germany!

Model overview

Frame size	Rotatable 360°	Component weight	Item number
3000 mm x 1500 mm	manual	50 Kg	64103015
3000 mm x 1500 mm	electromotive	200 Kg	64203015
3000 mm x 2000 mm	electromotive	200 Kg	64103020
3000 mm x 2500 mm	electromotive	200 Kg	64103025
4300 mm x 2000 mm	electromotive	200 Kg	64304320
4300 mm x 2500 mm	electromotive	200 Kg	64304325
4300 mm x 3000 mm	electromotive	300 Kg	64504330
